# Introducing 'Co-owned AI' at ETHDenver

At Ethereum Denver 2023, our CEO David Minarsch introduced what we are calling 'Co-owned AI'.

Today, AI is a powerful idea and one that is already generating immense value. However, ownership of the value generated by AI is mostly centered around single entities, giving them full control over the development, deployment, and governance.

Co-owned AI poses the possibility that AI can be collectively owned and controlled by a community that shares responsibility for its development, deployment, and governance. DAOs are particularly well positioned for this.

Check out David's presentation linked above and if you're interested in co-owned AI and DAOs, join the conversation at [co-owned.ai](https://co-owned.ai).
