

Mech Terms

1. Introduction and Scope

Valory AG ("Valory", as defined at <https://valory.xyz/terms>, herein: the "Valory Terms") develops and provides tools built on emerging technologies, including the Mechs (hereafter "Mechs", each a "Mech"), defined in Section 2. Mechs consist of on-chain smart contracts and off-chain software from which users can request and pay for services using cryptocurrency, as described below and in Section 2. The Valory Mechs and the associated "Marks" (trademarks, service marks, logos, and brand identifiers) are part of Valory's "Offerings" as defined in the Valory Terms and are governed by the Valory Terms.

These Mech Terms govern your use of the Mechs owned and operated by Valory (each a "Valory Mech"), including where a Valory Mech fulfils a request you addressed to another Mech. By submitting a request to a Valory Mech, you acknowledge and agree to be bound by these Mech Terms, the Valory Terms, and the Valory privacy policy (available at <https://valory.xyz/privacy/>), all collectively the "Conditions". If you do not agree to these Conditions, you must not submit a request to a Valory Mech. You also acknowledge the terms and privacy policies of "Third-Party Integrations" (protocols, platforms, models, data sources, tooling or services provided by entities other than Valory).

In the event of any conflict, inconsistency, or ambiguity between the components of the Conditions or the terms and privacy policies of Third-Party Integrations, the following order of precedence shall apply: 1) the Valory Terms (which shall govern and prevail in all matters, especially regarding Valory's liability, rights, and obligations); 2) these Mech Terms; 3) any terms and privacy policies of Third-Party Integrations.

Nothing in these Mech Terms shall be construed to waive, limit, or supersede any rights, remedies, or limitations of liability that Valory (or any legal entities that control, are controlled by, or are under common control with Valory, herein: "Affiliates") retain under the Valory Terms. Valory's use of, or integration with, any Third-Party Integration does not imply any assumption of liability for such third-party services.

Valory Mechs are facilitated by the permissionless Olas Marketplace, made up of the Olas Marketplace smart contracts ("Olas Marketplace Contracts", see <https://github.com/valory-xyz/autonolas-marketplace>) and Olas Marketplace frontend ("Olas Marketplace Frontend", see <https://marketplace.olas.network/>). The Olas Marketplace and the underlying Olas Protocol (see <https://olas.network/protocol>) are open-source, permissionless and are owned and governed by the Olas DAO (see <https://olas.network/faq>), not Valory.

These Mech Terms do not govern the Olas Marketplace itself; any Mech operated by anyone other than Valory; the Olas Protocol; the Olas DAO; or the OLAS token ([Section 2.2](#) and [Section 9](#)). They also do not grant, restrict, or modify any right you have under the open-source licence applying to Valory's published source code. The Valory

Mechs' source code is published at <https://github.com/valory-xyz/mech> under the Apache License, Version 2.0 (available at <https://www.apache.org/licenses/LICENSE-2.0>, the "Mech Licence"). The Mech Licence governs the code; it grants no right to use the Valory Mechs, or any Valory brand or Mark, and where it conflicts with these Mech Terms in respect of the code, the Mech Licence prevails as to the code only.

2. What You Are Interacting With

2.1 Valory Mechs

In the context of the Olas Marketplace, a "Mech" is the software that you request services from. Technically, a Mech consists of off-chain software, linked to an on-chain smart contract registered on the Olas Marketplace as an 'Agent', in the Olas Marketplace's terminology; the smart contract outlines what requests can be served and what they cost. Each Mech offers one or more "Tools": software modules, identified by name in the Mech's on-chain metadata, that each perform one or more tasks, such as producing a prediction, researching a question or generating an image. When you submit a request, you name the Tool that is to handle it. Mechs may be operated by anyone, and Section 9 applies to Mechs not operated by Valory.

A "Valory Mech" is a Mech that is owned and operated by Valory. Valory Mechs have been deployed on various blockchains, and these Mech Terms apply to every Valory Mech. You can confirm that a Mech is a Valory Mech by the following "Valory Mech Check": the domain name `<mech address without the 0x prefix>-<chain id>.mech.valory.xyz` resolves to an address in the public DNS (for example, `c05e7412439bd7e91730a6880e18d5d5873f632c-100.mech.valory.xyz` for the Gnosis Mech at `0xC05e...632C`). Valory creates that name for each Valory Mech and for no other Mech, and removes it when it ceases to operate the Mech; changes may take up to 24 hours to become visible. Valory Mechs also identify these Mech Terms in their on-chain metadata, but metadata is set by whoever controls the Mech and is not proof of Valory's operation on its own; a Mech that references these Mech Terms in its metadata but whose name does not resolve is not a Valory Mech, is not within these Mech Terms, and creates no liability or obligation on the part of Valory.

On-chain and off-chain requests. Requests can be sent to a Mech one of two ways: on-chain or off-chain and you must specify which you prefer when submitting your request.

- An on-chain request is made and answered through the blockchain. You send a transaction to the Olas Marketplace recording your request, which costs gas. A Mech can then pick your request up, do the work, and send a second transaction recording the result. Two transactions, with both the request and the result recorded on-chain, and the contents of your request are published and stay public.

- An off-chain request is made and answered directly by the Mech, and reaches the chain afterwards. You sign your request and send it over the internet to the Mech you have addressed. That Mech does the work and sends the result back to you. Only then does it record the request and the result on-chain, in a single transaction of its own. You receive the result before anything is recorded on-chain, you send no on-chain transaction yourself, and the contents of your request are not published.

A request submitted to a Valory Mech may sometimes be fulfilled by a different Mech that is not operated by Valory (see Sections 8, 9). Valory Mechs call third-party models, data sources and services, process their outputs using Valory's Tools, and deliver a transformed result (Section 10.1). The off-chain elements of Mechs may be built using the Olas Stack (<https://olas.network/stack>) or any other framework, provided they are compatible with the Olas Marketplace.

There is no Valory account, login, or API key associated with the Valory Mechs. You submit a request to a Valory Mech programmatically from a wallet you control. Payment is made on-chain and cannot be cancelled, refunded, or recovered by anyone, including Valory (Section 6), and that, depending on how you submit a request, your prompt and the result may be published permanently and publicly (Section 7). The Valory Mechs are the only Offering governed by these Mech Terms.

2.2 The Olas Marketplace — operated by the Olas DAO, not by Valory

As above, the Olas Marketplace is the venue where Mechs are listed, requests are routed, and payments are held in escrow and released. Valory does not own, operate, control, administer, upgrade, or maintain the Olas Marketplace, does not determine their fees or parameters, and accepts no responsibility or liability for them, for their availability, security or correctness, or for any loss arising from them. Valory registers its Mechs on the Olas Marketplace in the same way any other operator may.

Payments you make pass through Olas Marketplace Contracts, including an escrow contract ("BalanceTracker"), before any part reaches Valory. [Section 6](#) explains that flow and its consequences.

2.3 Client tooling

Valory may provide other open-source code (see <https://github.com/valory-xyz/>) including software such as the Mech Client, Mech Interact and Mech Server, which may be used to create, interact with or access Mechs. **Use of any such tooling is not required to use a Valory Mech and is not part of the Valory Mechs governed by these Mech Terms; it is instead governed by the licences in the repositories at the above GitHub link.** Any code you use in conjunction with the Valory Mechs is used at your own risk, under its own licence, and Valory gives no warranty and accepts no liability in respect of it, whether or not Valory published it.

3. Acceptance of These Mech Terms

There is no account and no interface operated by Valory through which you accept these Mech Terms. Instead:

1. Acceptance by conduct. Submitting a request to a Valory Mech constitutes your acceptance of the Conditions, in the manner contemplated by the Valory Terms, under which using or otherwise accessing an Offering constitutes acceptance. The date of your first request is the Effective Date.
2. Requests fulfilled by a Valory Mech. These Mech Terms also apply where a Valory Mech fulfils a request that you addressed to another Mech, as the OIas Marketplace permits after the response timeout (Section 6). The OIas Marketplace, not Valory, determines which Mech may fulfil a request and when; Section 6 describes that mechanic as it operates at the date of these Mech Terms. Retrieving or using a result delivered by a Valory Mech constitutes acceptance of the Conditions in respect of that request, and these Mech Terms apply to that request and result.
3. Notice. These Mech Terms are published at <https://www.valory.xyz/terms/mechs> and are referenced in the on-chain metadata of every Valory Mech. You are responsible for confirming a Mech's operator via the Valory Mech Check and reading the on-chain metadata, before submitting every request.
4. Requests submitted by software bind you. Where a request is submitted by software rather than by a natural person acting in the moment, "you" and "User" mean the natural or legal person who deploys, configures, funds, controls, or otherwise causes that software to operate. You are responsible for every request submitted by any software you deploy, configure, fund or control, and for all resulting payments, whether or not you reviewed the individual request. You represent that you have authority to bind any person on whose behalf you act, consistent with the Valory Terms.
5. Onward provision. If you make the Valory Mech functionality available to your own users, customers or agents, you remain the User under these Mech Terms and are responsible for ensuring that your use, and theirs, complies with the Conditions.

4. Acceptance of the Risks

The Conditions explain the risks involved in using Offerings like the Valory Mechs, which are based on emerging technologies including blockchain and artificial intelligence.

Results may be wrong. Results are generated by automated processes, including large language models and other AI systems supplied by Valory and by independent third parties. Results may be inaccurate, incomplete, fabricated, outdated, biased, non-deterministic, delayed, or entirely absent, and may differ between identical requests. Valory does not review, verify, or validate any result before it is delivered. You must not rely on any result without independent verification, and you are solely

responsible for any decision, transaction, or action you or your software take on the basis of a result.

No advice. Nothing delivered by the Valory Mechs or a part thereof constitutes investment, financial, trading, tax, legal, medical, or professional advice, a financial promotion, or an offer to manage assets, and the Valory Terms' provisions to that effect apply in full. This applies in particular to any prediction, probability, forecast, score, valuation, or market-related output. Valory does not assess your suitability, appropriateness, or risk tolerance. You remain solely responsible for your financial decisions and blockchain transactions and for understanding any legal, tax, or regulatory obligations that apply to you.

On-chain risk. Requests, payments and deliveries settle on public blockchains. Transactions may fail, revert, be delayed, reordered or front-run; gas costs and token prices fluctuate; and contracts, bridges, indexers, storage networks and RPC providers may fail or be exploited. Valory cannot reverse, refund, amend, or cancel any on-chain transaction, including its own. Any assets you use are at risk and you may lose some or all of them.

Jurisdictional restriction. Access to any or all functionality may be restricted based on jurisdiction, residency, sanctions, or eligibility requirements imposed by Valory or by third parties.

5. Limitation of Liability and Indemnity

Warning: the Valory Mechs and parts thereof are experimental open-source software provided "as is", without any representation or warranty that they have been fully audited, tested, or secured. If you choose to use them, you do so at your own risk. To the maximum extent permitted by law, and except where mandatory consumer protections apply, Valory is not liable or responsible for any delays, losses, damages, or issues resulting from or arising out of the access, use, cessation or interruption of use of any Valory Mech, any result delivered or not delivered, the Olas Marketplace, any Third-Party Integration, or the underlying technologies, nor for paying any costs related to the same. Nothing in these Mech Terms excludes or limits liability that cannot lawfully be excluded or limited. This applies to any claim arising from any Valory Mech or from any result, including the circumstances described in Section 6, and any such claim remains subject to the dispute resolution provisions of the Valory Terms (Section 14). For the avoidance of doubt, this section does not create any liability of Valory for the Olas Marketplace itself, which is addressed in Sections 2.2 and 10.2.

The disclaimers, exclusions of consequential and related damages, and aggregate liability caps set out in the Valory Terms apply in full to these Mech Terms and are not increased, extended, or waived by the fact that fees are paid for Valory Mech services.

You agree to hold harmless and indemnify Valory and its Affiliates from any third-party claim (including legal fees) arising from your use of the Valory Mechs or any part thereof, your use of any result, your breach of the terms of any Third-Party Integration,

or your violation of these Mech Terms, in accordance with the indemnification provisions of the Valory Terms.

6. Fees, Payments, Escrow and Non-Refundability

Read this section before submitting a request: it explains why a payment cannot be reversed once made.

How payment works.

- At request submission:
 - On-chain requests: When you submit an on-chain request, you pay network gas, and the budget you set for that request is transferred into the BalanceTracker within the Olas Marketplace Contracts.
 - Off-chain requests: When you submit an off-chain request, you sign it and send it directly to the Mech, you pay no network gas at that point, though your budget must already be held in the BalanceTracker so you may incur gas in funding the BalanceTracker if you don't already have funds there. An off-chain request is not recorded on-chain and you are not charged for the request fulfilment unless and until the Mech fulfils the request.
- At request fulfilment:
 - For both on-chain and off-chain requests: When a Mech records a request delivery with the Olas Marketplace, the Olas Marketplace releases your funds in the BalanceTracker and the Mech triggers them to be sent to the relevant places: a protocol fee, i.e. a percentage of the request budget defined by the Olas Marketplace Contracts ("the Protocol Fee"), is taken by the Olas DAO, and the remainder is paid to the operator of the delivering Mech. Where that is a Valory Mech, the remainder is paid to Valory as consideration for the performance of the task. This is not a subscription, licence fee, or investment.

Timeouts and late delivery.

- On-chain requests: Each on-chain request carries a response timeout. Before the timeout expires, only the Mech you selected may deliver. After it expires, any Mech may deliver. **A request that is not fulfilled remains open indefinitely. If any Mech delivers a result at any point after the timeout, however long afterwards, that Mech is paid your escrowed budget.** You may therefore be charged for a result you no longer want, delivered by a Mech you did not select and whose operator is unknown to you and is not Valory.
- Off-chain requests: Off-chain requests carry no response timeout. The request you sign identifies the Mech that may settle it, so no other Mech can deliver it and be paid for it. If that Mech never settles the request, the request is never recorded on-chain and you are not charged for it.

No refund, no cancellation, no withdrawal. There is no refund and no cancellation if no result is delivered. Unused balance cannot be withdrawn from the BalanceTracker,

by you, by Valory, or by the Olas DAO. Valory has no ability to return, release, redirect, or recover any escrowed funds. Only set a request budget you are content to lose.

Prices and fees. Mechs are designed to deliver only when their price (which may change at any time) is equal to or less than your escrowed budget, therefore preventing Mechs with a price exceeding this limit from delivering your request. The Protocol Fee is set, changed and administered by the Olas DAO, not by Valory, and may change without notice to you; see [Section 10.2](#). Consistent with the Valory Terms, Valory is not liable for any pricing, exchange rate, valuation, or other errors, discrepancies, or inaccuracies related to digital asset payments, whether caused by Valory, third parties, or market fluctuations, and you assume all risk associated with such transactions. Valory receives no payment in connection with your use of the Olas Marketplace other than the amount released to it by the Olas Marketplace as operator of a delivering Valory Mech. Valory takes no share of the Protocol Fee, holds no escrowed funds, and receives nothing in respect of Mechs it does not operate.

Karma scores. The Olas Marketplace Contracts include a reputation ("karma") scoring system for Mechs. Any reputation, karma or ranking score shown in respect of a Mech is offered by the Olas Marketplace Contracts, not provided by Valory. It is not a recommendation, endorsement, warranty, or assurance of performance by Valory, and must not be relied on as one.

No recourse for non-delivery or for fee calculation. There is no dispute, appeal, remediation, or claims process for an individual request, at Valory level or at Olas Marketplace level. The Olas Marketplace Contracts are smart contract software that execute exactly as coded, may be in part immutable, including in calculating and taking the Protocol Fee, and neither Valory nor the Olas DAO can amend, override, or reverse that execution. If a Valory Mech does not deliver a result, delivers late, or delivers a result you consider defective, or if you consider that the Olas Marketplace has taken an incorrect fee, released funds incorrectly, or failed to release funds, **you have no right to a refund, a redelivery, a credit, or a correction, and Valory has no ability to provide one.** Valory's position in respect of the Olas Marketplace Contracts and the Olas DAO is set out in Sections 2.2 and 10.2. You accept this as a characteristic of experimental, immutable, on-chain software, and you should not submit requests whose value to you exceeds what you are willing to lose without recourse.

7. Requests, Results and the Publicity of Your Data

Whether your request and result are public depends on how you submit the request, and the choice is yours and is irreversible. This applies identically on every chain.

If you submit an on-chain request, the full text of your prompt and the full text of the result are published to IPFS and become public. The wallet address, the Mech, the price and the content hashes are **recorded permanently on the relevant blockchain and cannot be altered or deleted by anyone.** Content published to IPFS is distributed across a public network of independently operated nodes; once published, Valory cannot delete, amend, redact or make it private, and cannot prevent others from

retaining or republishing it. Valory cannot comply with any request to erase, rectify, or restrict it.

Off-chain requests are not published publicly. If you submit an off-chain request, the prompt and the result are not published to IPFS and are not made public. Only the content hashes, the wallet address, the Mech and the payment are recorded on-chain, and those remain public and permanent.

Valory's own records. Valory records the content of requests and results, together with the requesting wallet address, in its own systems, for both on-chain and off-chain requests. Valory uses this data to operate, secure and monitor the Valory Mechs, to analyse their usage and performance and can use this data to evaluate and improve its Tools, including to develop and train models. Valory's handling of this data is described in the Valory privacy policy.

Your responsibility. You are solely responsible for choosing how to submit each request and for the content of every request. **Do not include personal data, special category data, credentials, private keys, confidential information, trade secrets, or any other content you are not content to publish irrevocably in any request, whether on-chain or off-chain.** You represent and warrant that you hold all rights and consents necessary to submit the content of your requests and to have it processed and, where applicable, published, and that doing so will not infringe or misappropriate any third party's intellectual property, confidentiality, privacy, or other rights.

Consistent with the Valory Terms, you retain rights in your content and grant Valory the licence set out there to host, store, copy, transmit, process, display and modify it as necessary to provide, secure and support the Valory Mechs, and to develop, train and improve Valory's Tools and models, and Valory may generate and use data derived from your use of the Valory Mechs as permitted by the Valory Terms.

Requests are processed by Valory Mechs and, where a task requires it, by the Third-Party Integrations they call ([Section 10.1](#)) which may be located outside your country and which process it under their own terms and privacy policies.

Non-custodial. Valory does not take custody of your funds, does not access or control your wallet or keys, and does not act as a financial intermediary on your behalf. Valory does not approve, reject, modify, or reverse any transaction you initiate. All wallet keys and configurations remain under your control, and the Valory Terms' provisions on your security and backup apply in full.

8. Valory Mechs

Valory Mechs perform work off-chain, including by calling third-party models, data sources and services and by processing their outputs using Valory's Tools to produce a result. Valory does not review, verify, or approve any individual result. Valory does not warrant that any Valory Mech will be available, that it will respond to any particular request, or that any result will be accurate, complete, current, or fit for any purpose.

Valory may add, modify, deprecate, suspend, or withdraw any Valory Mech, Tool or model, and may change the models, tools, data sources, pricing or logic used, at any time and without notice, in accordance with the Valory Terms' provisions on changes to the Offerings. Valory may decline to serve, rate-limit, or block any User, including for suspected breach of these Mech Terms, of the Valory Terms' Acceptable Use Policy, or of any applicable law or third-party terms, without any obligation to compensate you or any third party for resulting losses.

A request addressed to a Valory Mech may be fulfilled by a different Mech that Valory does not operate. This may occur in a number of circumstances, including but not limited to where no Valory Mech delivers a result within the response timeout. Valory does not warrant that a request addressed to a Valory Mech will be fulfilled by a Valory Mech. Where a request is fulfilled by a Mech that Valory does not operate, the result is not produced, reviewed, or approved by Valory, Valory accepts no responsibility or liability for it, and [Section 9](#) applies to it in full.

9. Other Mechs and Operators

Mechs operated by persons other than Valory are available on the Olas Marketplace. **Valory does not operate, control, configure, audit, monitor, select, vet, rank, curate, recommend, or endorse any of them, nor the code they run, nor the results they return, and these Mech Terms do not apply to them.**

Valory is not a party to any transaction between you and any other operator. Any contract for the performance of a task by a Mech that Valory does not operate is between you and that operator. Any claim relating to non-delivery, defective results, misuse of your request data, or breach of third-party rights by such a Mech lies against that operator and not against Valory. Such operators are frequently pseudonymous or unidentified and you may have no practical means of enforcing any claim against them. You accept that risk. This applies in particular where, after a response timeout, your request is fulfilled by a Mech you did not select ([Section 6](#)).

Valory makes no representation that any other Mech or operator complies with applicable law or with the terms of any model or data provider it relies on, and accepts no liability for their acts or omissions.

10. Third-Party Services

To the maximum extent permitted by law, Valory is not liable for any third-party service; you use them at your own sole risk and must comply with their respective terms. To the fullest extent permitted by law, Valory shall not be liable for any direct, indirect, incidental, special, punitive, or consequential damages arising from the use of any Valory Mech or any third-party service, and the liability caps and exclusions in Section 5 and the Valory Terms apply to any liability that is not excluded.

10.1 Model and data providers, and the transformation of third-party data

Valory Mechs may call third-party services to perform tasks, including third-party artificial intelligence models, data providers, and RPC, indexing, storage providers, and other providers. These services are independently developed, owned and operated by their respective providers, are not owned, controlled or operated by Valory, and may change or become unavailable at any time. Valory does not modify these services, does not guarantee their availability, security, correctness or performance, and is not liable for any losses, damages or issues arising from or related to them, including any output they generate. Any mention of, or interaction with, such providers does not constitute or imply a partnership or other relationship with them, nor an endorsement by them.

A result is a derived output, not third-party data. The result delivered by a Valory Mech is produced by Valory's Tools running within the Valory Mech, which processes and transforms the outputs of any third-party service it calls. It is not, and is not offered as, access to, a copy of, a substitute for, or a resale of any third-party dataset, model, or service. You obtain no rights in any third-party data, model, or output beyond those the relevant provider grants you directly.

You must not use any result in a manner that would breach the terms of any provider whose service contributed to it, including any restriction on redistribution, resale, extraction, benchmarking, or on using outputs to train or develop competing models. You must not use a Valory Mech to extract, reconstruct, or redistribute a third-party provider's underlying data, model weights, system prompts, or raw outputs. You are responsible for complying with those restrictions in your use of any result and you indemnify Valory for any breach by you. This applies in respect of results delivered by a Valory Mech; where a request is fulfilled by a Mech that Valory does not operate (Sections 6, 8,9), Valory makes no representation as to which third-party services contributed to the result.

10.2 The OIas DAO, the OIas Protocol and OIAS

As stated above, the OIas technology, Protocol, Token and DAO are independent open-source or community-governed initiatives, are not Offerings of Valory, and are not under Valory's control.

Valory does not control, and makes no representation as to: the OIas Marketplace Contracts or the OIas Marketplace Frontend or their availability, security or correctness; the level of any Protocol Fee, now or in future; the operation of the BalanceTracker escrow; the OIas DAO's treatment of fees it receives, including any buy-back-and-burn or treasury mechanism; karma or reputation scoring; or any governance decision of the OIas DAO. You assume all risks associated with acquiring, holding, or transacting with OIAS or any other token, including loss of assets or value, irretrievability, and tax or regulatory obligations. Valory is not responsible for any token-related losses, nor for any act or omission of the OIas DAO.

10.3 Blockchain networks and storage

The Valory Mechs depend on external offerings, “External Offerings”, including public blockchain networks, RPC endpoints, indexers, and distributed storage networks including IPFS, operated by independent third parties, frequently by multiple independent and in some cases pseudonymous operators rather than a single identifiable entity. Valory does not operate or control External Offerings, does not guarantee the persistence, availability or integrity of any data stored on them, and is not liable for their availability, accuracy or timeliness or for the acts or omissions of any such operator.

11. Results and Intellectual Property

As between you and Valory, and subject to the rights of any third-party provider whose service contributed to it, Valory does not assert ownership of the result delivered to you by a Valory Mech, and you may use that result for your own purposes subject to these Mech Terms and to [Section 10.1](#).

Valory makes no representation or warranty that any result is original, accurate, or free of third-party intellectual property, privacy, publicity, database, or other rights, and gives no warranty of non-infringement. Identical or similar results may be delivered to others, and results of on-chain requests are public ([Section 7](#)). You are solely responsible for determining whether your intended use of a result is lawful and permitted, and for obtaining any licence required for that use.

The licence restrictions in the Valory Terms apply, including the restrictions on reverse engineering, on avoiding fees or usage limits, on scraping, and on reselling or sublicensing the Offerings. Nothing in these Mech Terms grants any right to use the Valory, Olas, Pearl or Mech names, brands or Marks.

12. User Responsibilities and Prohibited Uses

You represent and warrant that your access to and use of any Valory Mech complies with all applicable laws, regulations, and third-party terms, including restrictions based on jurisdiction, sanctions, or residency, and that you are solely responsible for such compliance. Without limitation, you represent and warrant that: (i) you access and use the Valory Mechs only from jurisdictions where such use is lawful; (ii) you are not located in, resident in, or acting on behalf of any person or entity subject to sanctions or restrictive measures administered or enforced by OFAC, Switzerland, the European Union, or the United Nations; and (iii) you do not use VPNs, proxies, or other technical measures to circumvent geographic, sanctions-related, or eligibility restrictions imposed by Valory or by any Third-Party Integration.

The Acceptable Use Policy in the Valory Terms applies in full. In addition, and without limitation, you must not use any Valory Mech to: submit requests that are unlawful or that seek unlawful content; generate or distribute malware or exploits; generate material that infringes intellectual property or privacy rights; generate content that sexually exploits or endangers children; generate content intended to harass, defame,

deceive, or defraud; publish, through an on-chain request, content you have no right to publish; breach the terms of any model or data provider ([Section 10.1](#)); circumvent pricing, rate limits, blocklists, or quotas; obfuscate the origin or purpose of a request in order to evade these Mech Terms or any provider's terms; or launder proceeds of crime or finance terrorism.

You are responsible for the behaviour of any software you deploy, including where it is autonomous, is influenced by content it processes, or is subject to prompt injection. The fact that a prohibited request was generated by software rather than typed by you is not a defence.

13. Availability, Suspension and Changes

The Valory Mechs are provided without any service level, uptime, throughput, or response-time commitment. Valory may change, suspend, limit, deprecate, or discontinue any Valory Mech in whole or in part, at any time, in accordance with the Valory Terms' provisions on changes to the Offerings, and may suspend or terminate your access in accordance with the Valory Terms' provisions on temporary suspension and termination, in each case without any obligation to compensate you or any third party for resulting losses.

Because the underlying contracts are deployed on public blockchains and the Olas Marketplace is governed by the Olas DAO, Valory may be unable to prevent continued interaction with those contracts, and any such continued interaction is not the provision of an Offering by Valory and is not covered by these Mech Terms.

14. Updates, Governing Law and Dispute Resolution

Valory may update these Mech Terms from time to time to reflect changes in the Valory Mechs or in legal requirements. Updates will be effective when posted at <https://www.valory.xyz/terms/mechs>, and continued use after posting constitutes acceptance. If you do not agree to the Conditions your sole remedy is to discontinue your use of the Valory Mechs.

These Mech Terms shall be governed by and construed in accordance with the substantive laws of Switzerland, excluding the United Nations Convention on Contracts for the International Sale of Goods dated 11 April 1980 (CISG), as amended from time to time.

All disputes arising out of or in connection with these Mech Terms, including disputes on their conclusion, binding effect, amendment and termination, shall be resolved in accordance with the dispute resolution provisions of the Valory Terms. If any provision of these Mech Terms is found to be invalid or unenforceable, the remaining provisions shall remain in full force and effect.

Version. These Mech Terms are version 1.0, effective 17 September 2026.

15. Support

If you encounter a problem or have a question, please contact admin@valory.xyz. Support is provided for convenience and does not create any contractual obligation on Valory. Valory makes no guarantee, warranty, or representation regarding the timeliness, completeness, accuracy, or adequacy of any response, and nothing said in the course of support varies these Mech Terms or the Valory Terms. In particular, and consistent with [Section 6](#), contacting support does not give rise to any right to a refund, redelivery, credit, or correction in respect of any request.
